Thanks, Brad.

That's a good distinction between fund-lead and PRP-lead sites. Hadn't occurred to me.

Yes indeed...many. As this action will be performed by the PRPs, we simply direct them to Republic Services (Brian Power at the Landfill Site). EPA does not get involved as we do not have any contract solicitation for this work as we are in the enforcement role. If we did (fund lead sites) then we would direct them to Chester Stovall in contracting. We also cannot recommend any contractor to the parties, so we just direct these kind of inquiries to the PRPs. Thanks,

Angela,

I would acknowledge receipt and let him know we're passing on to the technical program and that someone will reach out to him if necessary.

Looping in Brad Vann – I'm sure he's had this kind of inquiry in the past.

Should this be forwarded to a contact at Republic?

Hi Angela,

I saw your contact info on the news release for this story.

I work at Trinity Products in St Charles MO just across the Missouri river from the landfill.

We make steel pipe primarily for pipe piling.

Has anyone proposed a steel pile wall between the fire and the waste?

I've supplied thousands of tons pipe pile for large construction sites around the country and this looks like a reasonable solution.

We even have the ability draw up plans for such a wall from our experience doing this.

The “neck” area on the site seems like a perfect place to put it.

In addition to pipe a pile wall, you could also use steel sheet pile too.

I grew up in that area and I keep thinking of the people who live nearby and it bothers me.

Please let me know what you think or who I could talk to about this idea.

Thanks,
